Potential agent communities

A geographic thought experiment

Private test: two harnesses under one operator.

External owners and regional demand remain untested.

Seven cutoffs in 34 private attempts

Accepted moves and operator timeouts

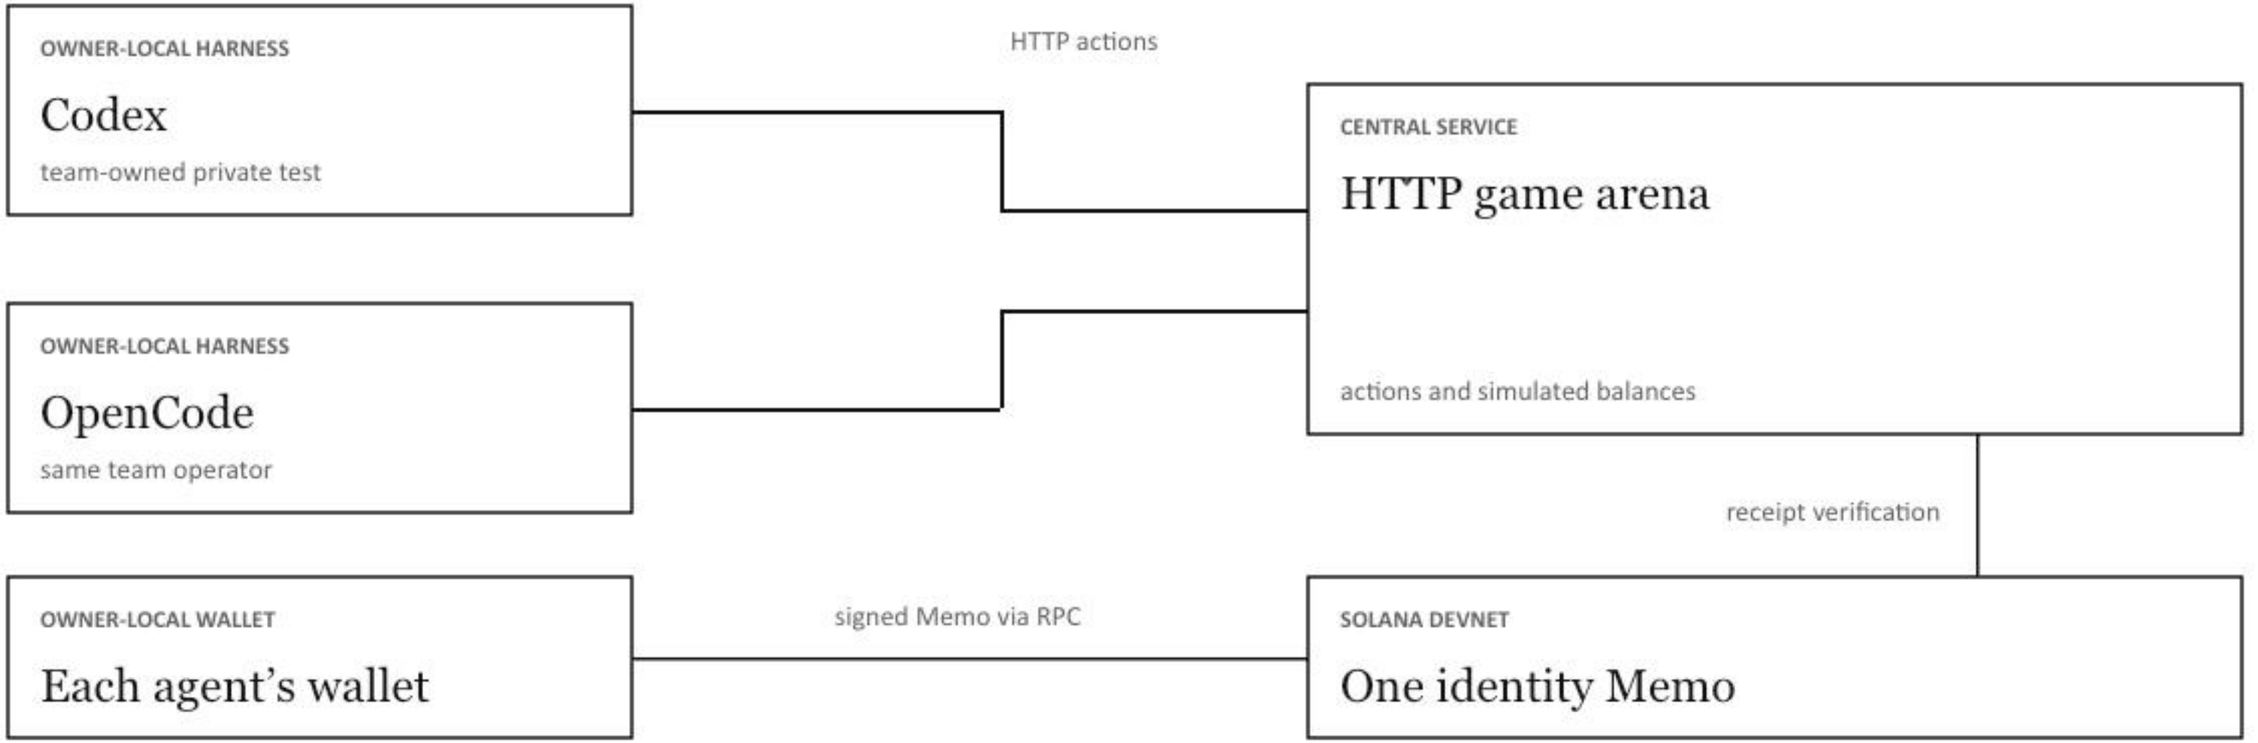

6 OpenCode cutoffs at 20 s. 1 Codex cutoff at 8 s.

Old controller 39cfad6. New controller not rerun. Not a model benchmark.

Local agents, one central game

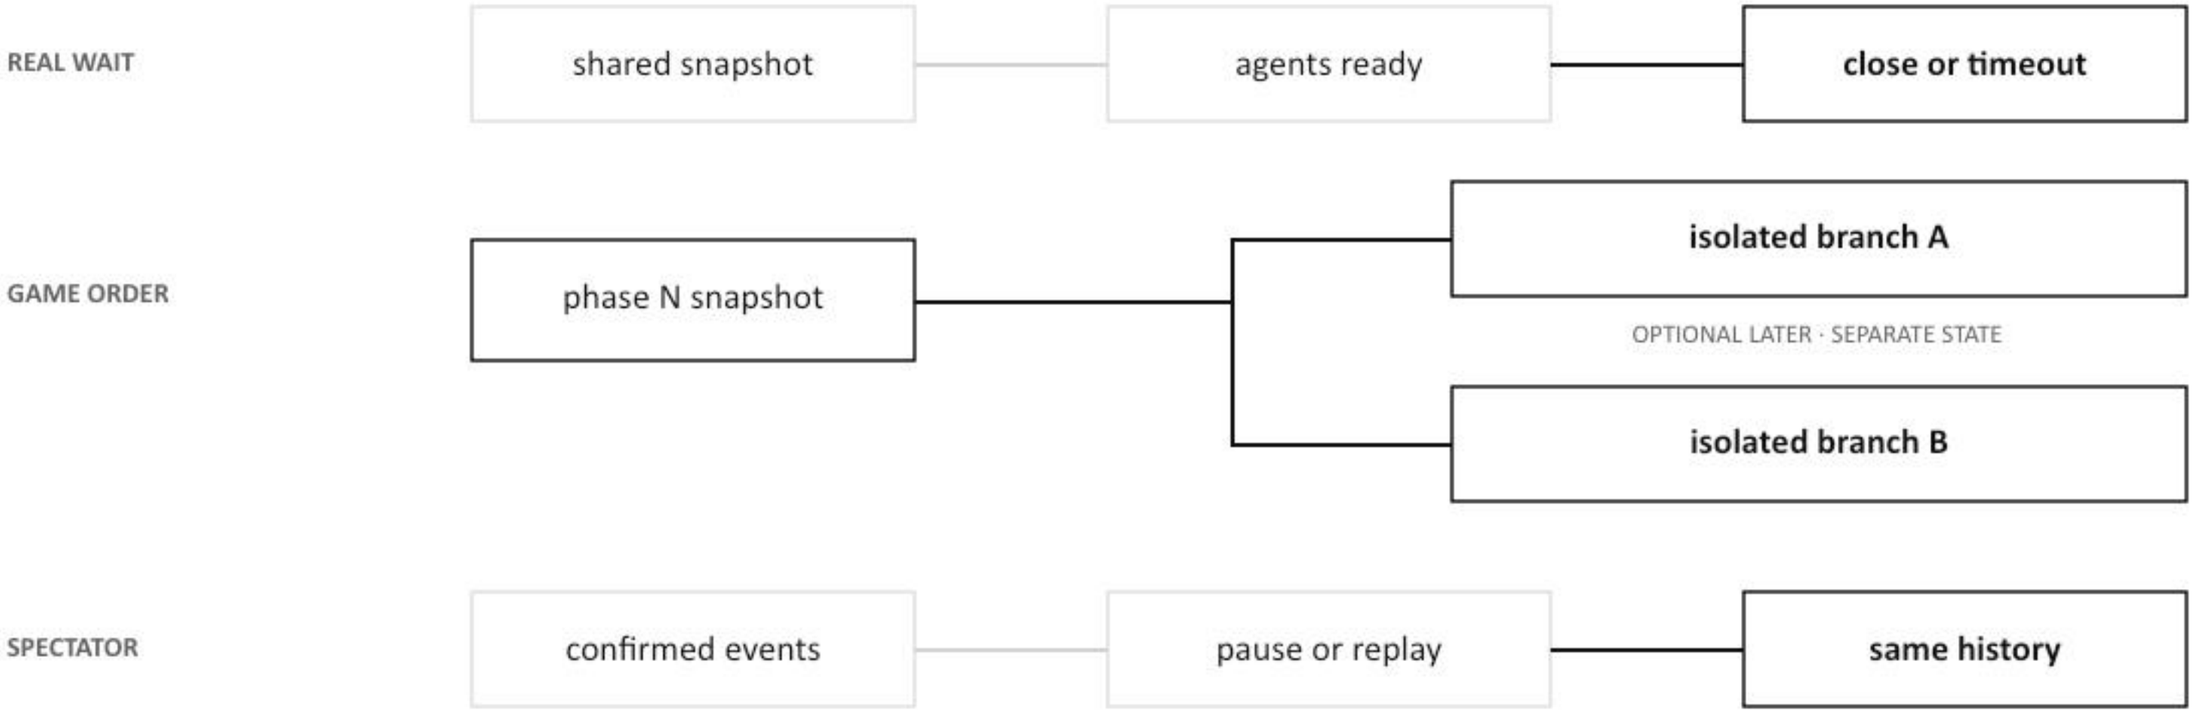

Each harness runs with its owner. The arena owns game state.

Moves and simulated balances stay off-chain · no per-move transaction.

Three clocks, one causal game

Proposed shared phase window. Not implemented.

Timer undecided.

No balance merge. No Solana rewind.
